

## VIEWFINITY PRIVILEGE AND SYSTEMS MANAGEMENT ASSET MANAGEMENT

---

### *Asset Inventory*

Viewfinity provides the ability to dynamically collect an accurate and real-time inventory of your entire desktop computing infrastructure along with associated procurement details. Hardware inventory will automatically collect detailed information about the hardware characteristics of client computers such as memory, operating system, peripherals, services, and processes that are running on each PC. Software inventory will gather information such as file size, file date, file path, product names, and versions.

Viewfinity's inventory metrics generate meaningful reports needed by IT and business decision makers so you can effectively prepare for software audits, track spending, ensure compliance, identify vulnerabilities within the desktop environment and make informed decisions about your IT investments.

### *Actionable Asset Inventory Reports*

#### **Hardware Reports**

- Hardware Summary
- Memory Summary
- BIOS Summary
- Disk Size Summary
- CPU Summary

#### **Software Reports**

- Operating System Summary
- Software Inventory Summary
- Software Usage Summary

#### **Viewfinity Activity Reports**

- Agent Deployment Summary
- Agent Versions & Upgrades
- Completed Software Distribution Tasks
- Application Policies

#### **Viewfinity Windows 7 Readiness Assessment Reports**

- Windows 7 Hardware Readiness
- Windows 7 Software Readiness

#### **Report Example: Software Usage Summary**

This report provides detailed information regarding the actual usage of applications and cross-references usage with the amount of licenses owned. With this side-by-side display of licenses owned compared to actual usage, companies can control and administer software license allocation based on application usage activity. Effectively assists in understanding what software is being used, helps with license purchase decision making, and presents license compliance status on a real-time basis.

Software License & Usage Summary For Last Day Period

Application Name	Installed On Computers	Used On Computers	Number Of Licenses*
<input type="checkbox"/> µTorrent	2	0	N/A
<input type="checkbox"/> Able2Extract v4.0	1	0	15
<input type="checkbox"/> Camtasia Studio 5	3	3	2

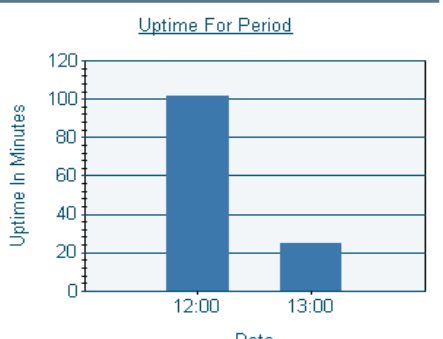

Camtasia Studio 5 Summary For Last Day

Launches

Date	Number of Launches
12:00	4
13:00	11

Uptime For Period

Date	Uptime In Minutes
12:00	100
13:00	25

Computer Name	Launches	Uptime
VF-XP-CLIENT1	6	1h 41m 37s
VF-XP-CLIENT2	4	17m 15s
WIN7CL1	5	7m 12s

*Benefits and Features:*

*Key Benefits of Asset Inventory:*

- Prepares for software audits, tracks spending, identifies vulnerabilities, and reconciles purchases
- Dynamically inventories all of your PCs and provides reports on CPU speed/type, disk space, memory, NIC address, manufacturer, serial number and more
- Collects complete inventory of all installed software including software name, version, installation location, file details and more
- Forecasts future software license needs based on real-time usage information
- Ensures compliance with software license agreements and avoids exceeding license inventory
- Helps gauge and assess your Windows 7 readiness

*Key Features of Asset Inventory:*

- Reports real-time inventory of all software and hardware assets
- Displays a centralized view of all software and hardware assets by group, department, or entire organization
- Provides the ability to query for specific software versions or hardware characteristics
- Reconciles software purchasing and inventory
- Advanced reporting on software usage based on user groups, time frame and other filters
- Displays side-by-side listing of licenses owned compared to actual usage
