

VIEWFINITY PRIVILEGE AND SYSTEMS MANAGEMENT COMPANY OVERVIEW

You have to do more with less each and every day, and we want to help. Our business is focused on providing excellent solutions that help IT professionals manage, support and control its desktops, laptops and Windows server environment via a cost savings hosted platform. Our optional cloud-delivery platform allows for out-of-the-box cost savings — no additional investment is needed for IT infrastructure to rollout our technology. Leveraging our underlying technology, we've designed a set of privilege and systems management features that help resolve many of the challenges related to managing multiple, distributed desktops.

Viewfinity Value Proposition

1. **Protects corporate IT assets**
2. **Reduces the cost of administering and managing laptops and desktops**
3. **Improves IT operational efficiency**
4. **Enhances control over your systems environment**

Viewfinity is committed to customer-led product development. We build products that are critically needed in the market. While our products will always be technologically advanced, we are not just another high-tech company creating technology for technology's sake. We listened. We researched. We validated our findings through in-person meetings with IT professionals. Then we committed ourselves to providing solutions to the problems that businesses need to resolve.

Technology that Delivers Business Value

Viewfinity offers a single platform to support on-network and mobile users that allows IT administrator's to manage and control any computer over the WAN regardless of worker location. Viewfinity solves IT's greatest headache—management of mobile workers—with true native remote systems management capabilities and absolute network independence, eliminating reliance on corporate network connectivity or VPN.

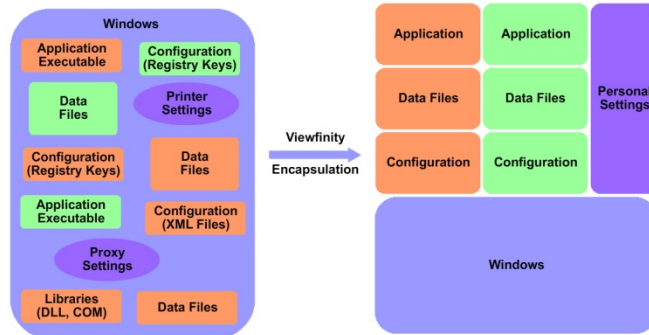

We offer a better method for providing in-house and mobile workforce with patch management and software deployment, management of user privileges, troubleshooting and fast problem resolution. We also offer OS deployment. Viewfinity complements traditional systems management, such as SCCM and SMS, by offering new flexibility to manage administrator rights for locked down computers. The software is intuitive and easy to use, and requires no training.

Our underlying virtualization technology is purposely architected to provide capabilities that focus on reducing the cost and time related to IT operations and support by providing the most flexible, secure and manageable environment for providing excellent IT support for your distributed workforce.

Virtualization Encapsulation Process

Virtualization is a means to an end. Our privilege and systems management features take advantage of virtualization technology to deliver business value. Viewfinity provides a powerful approach to laptop and desktop virtualization, based upon our encapsulation technology, which separates applications and Windows settings from the OS into self-contained capsules. By encapsulating these items, Viewfinity eliminates contamination between OS files/registries and prevents conflicts. At the same time, the software has the ability to share part of the encapsulated content among different encapsulated applications

(patented technology), allowing applications to interact normally with both the OS and other applications. This process is fully transparent and both the end user and IT administrator experience is unchanged, removing your risk of user-adoption issues. Our software works with existing and new deployments. There is no need to prepare applications or change anything about your environment before using Viewfinity.

Systems Management Solutions

Using Viewfinity, IT can manage all laptops and desktops on the application level, even if the machine is located beyond the boundaries of the corporate network. The software provides traditional laptop and desktop management capabilities, support for servers, as well as flexible privilege management for locked down environments. Viewfinity’s enables several practical uses, including application-level activity recording, rollback of user personality settings, desktop control and compliance policy enforcement, advanced asset reporting, and more.

Viewfinity Value Proposition	
Protects corporate IT assets	Viewfinity safeguards against vulnerabilities. We provide the ability to restrict individual applications from operating on your network on a per-machine and/or per-group basis. Applications can be white listed by time slot by enabling or disabling access to certain applications or URLs during business hours or while the laptop is connected to the corporate network.
Reduces the cost of administering and managing laptops and desktops	Viewfinity laptop and desktop virtualization is an enabling technology by which systems and privilege management can be improved. All of our capabilities are focused on reducing the cost related to application, OS and PC support by providing the most flexible, secure and manageable environment for applications and their associated data.
Improves IT operational efficiency	Viewfinity enhances a system administrator’s ability to immediately respond to technical problems. By enabling IT professionals to resolve troubleshooting calls in mere minutes, we elevate your ability to resolve level 1 and 2 problems that normally consume additional IT resources. This improvement in IT operations allows your IT personnel to focus on revenue enhancing projects.
Enhances control over your systems environment	Viewfinity provides flexible lock down and control over the types of applications and privileges your distributed workforce are allowed to install and run, stabilizing your desktop environment and reducing end user calls into the help desk.
